

# TRAINING

## CUSTOMIZED PROGRAMS TO ENHANCE THE SKILLS OF YOUR LUBRICATION TEAM

At Colfax Fluid Handling's Reliability Services, we understand that the reliable operation of your rotating equipment is integrally linked to your lubrication team. Our approach to Training services is to build on the existing strengths of your team and to focus on enhancing skills in areas that need improvement to establish best practices in lubrication at your facility.

Our lubrication specialists review your facility's existing training materials and, if possible, sit in on a real-time facility lubrication training session, as well as conduct individual interviews with your team. From this benchmark, we design and propose a Training program based on your individual needs. This is not an "off-the-shelf" solution, but a unique, custom program that will capitalize on your existing strengths and focus on enhancing skills for areas that need improvement. Training can range from very basic skills management to International Council of Machine Lubrication (ICML) levels, depending on what best serves your needs and objectives.

### We provide training and recommendations for best practices in areas such as:

- Lubricant handling, shipping, storage and warehousing, documentation
- Adding, topping off and relubrication
- Operations
- Safety
- Sampling
- Contamination control

### Reliability Services

CLARUS® COT-PURITECH<sup>SM</sup> LSC® LUBRITECH® SICELUB®

Classes range from half-day to full-day, depending on the specific needs of your facility. Should your team be particularly strong in a certain area, we provide refresher-style training. Our lubrication specialists address weaknesses with individual, concentrated training. Training can take place on-site or off-site; most is classroom-based with some hands-on experience. We can also provide operational, real-time training.

We recommend follow-up training and assessment as part of your annual Reliability Services review.
