

POINT OF LUBRICATION

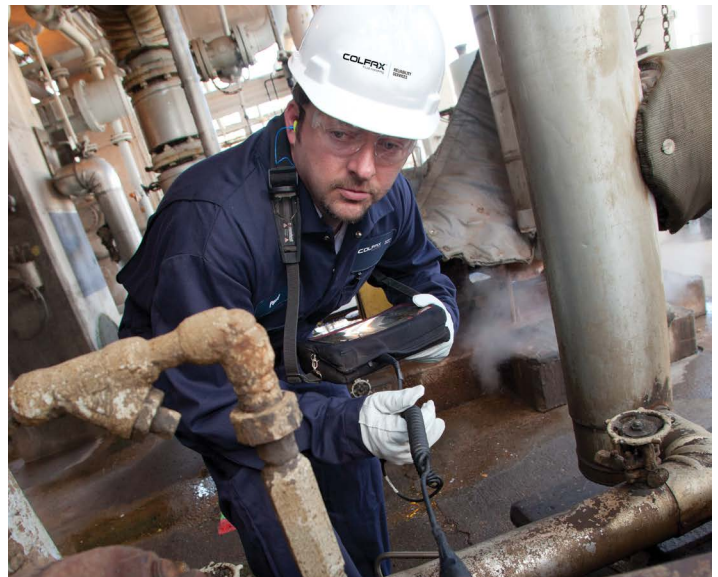

LUBRICATION AND RELUBRICATION SUPPORT FOR OPTIMAL ROTATING EQUIPMENT PERFORMANCE AND LIFE

At Colfax Fluid Handling's Reliability Services, we understand the importance of delivering the right lubricant in the right amount to the right place at the right time. That's key to ensuring the life of your rotating equipment, as well as reliable performance at your facility.

Our Point of Lubrication services include a complete review of your facility's lubrication and relubrication methods and schedules. We review cycle times. And because it's imperative that you're using the proper lubricant – and at the right levels – we examine your lubrication practices for each piece of rotating equipment.

We work with your team to establish best practices, whether that involves setting the lubrication schedule and interval times, reviewing the methods (manual or automatically) or prescribing the ideal application practices. If you're using hand-held devices to check lubrication via lube routes, we ensure that best practices and checkpoints are established.

Maintaining the proper relubrication practices is just as important – ensuring that only clean oil is delivered in clean, properly maintained vessels or lube routes. We'll help your lubrication team identify potential issues by teaching them to recognize contamination by a lubricant's look or smell. The goal is to not only establish written

procedures, but to provide your staff with the experience and know-how to ensure that lubrication is done right, every time.

Point of Lubrication services from Reliability Services help you get on the right lubrication track and keep you there to make sure your facility is always Up and Running.
