

Reclamation Equipment Rentals

Process Details

1 Vacuum Dehydration Equipment

2 Flush Equipment

3 Portable Filtration Equipment

4 Portable Laser Particle Counters

Sometimes it's not possible to shut down critical systems for needed repairs until the next scheduled outage, even though contaminant ingress is high.

COT-PURITECH™ offers a highly effective solution for such situations. We can provide a variety of purification skids on a short or long-term basis, allowing you to continue operations while addressing your contamination issues. In addition, we offer portable laser particle counters to help routinely monitor reclamation equipment effectiveness.

On-site Inspection Provided by Lubrication Experts

Knowledgeable **COT-PURITECH™** staff work with plant personnel to:

- Coordinate the appropriate response to your immediate need for lubrication-related assistance and on-site purification capability
- Help determine the root cause of contamination events and assist in implementing a long-term solution

COT-PURITECH's™ technicians arrive on-site to:

- Propose reclamation equipment rental options for maintaining system cleanliness until repairs can be made (see Process Details, on the left)
- Coordinate delivery, set-up, and operational training at the plant site
- Follow-up rental service with recommendations for ensuring long-term performance, such as establishing routine **Oil System Preventive Maintenance**

Bottom Line Benefits

- Revenue guarantee through avoidance of unscheduled downtime
- Reduction in component expenses due to wear degradation
- Reduction in added lubricant expense caused by product degradation
- More effective maintenance control

Environmental Health and Safety

COT-PURITECH™ routinely reviews EPA and safety regulations, including the latest updates as they apply to your specific operations. In addition, **COT-PURITECH™** carries extensive liability insurance.
